

FLAGS:

FIXED OR ROTARY MASTS AND SUPPORTS

Domfesa flagpoles and accessories are manufactured according to the established regulations and meet the strict quality standards with stainless steel in glossy, matt or painted finish.

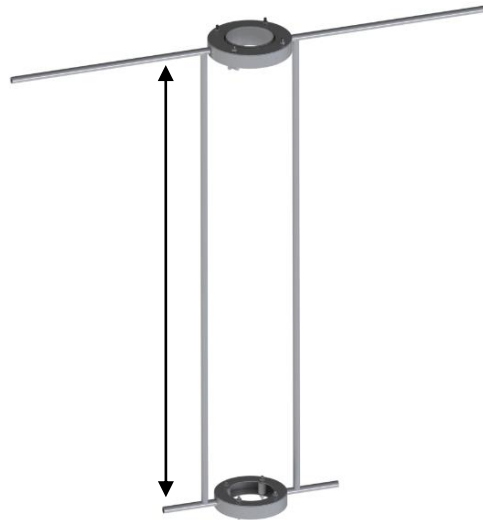

Our designs include different systems for fixing to the ground, either to be screwed on or to be concreted on site. All Domfesa models are designed with a system that makes it quick and easy to dismantle the mast or flag stand, in a quick and safe way.

Within the Domfesa design range, there are different models manufactured to standard measurements and heights.

In addition, our team has developed a parametric control system that adapts to the most demanding needs of our clients, guaranteeing absolute functionality.

In Domfesa we have developed a fixed-rotational support system that complements and evolves the classic flag support, with reliability and strict quality, the Domfesa support is versatile, adaptable to climate and driving infrastructure presented by our customers.

Thanks to the industrialised system with which we design our masts and flagpoles, at Domfesa we supply equipment that is easy to install, assemble and, if necessary, dismantle.
